

PROLACTIN: timed blood samples

INSTRUCTIONS

Seriata Blood Collection Center: arrive between **9:00 AM and 10:00 AM**.

Trescore Balneario Blood Collection Center: **arrive at 7:30 AM**.

At all other company blood collection centers, **arrive by 8:30 AM**.

No special preparation is required in the days prior to the test. Follow the general instructions for blood test preparation.

The test involves taking a baseline blood sample, followed by an infusion of saline solution while the patient remains lying down and relaxed. After 30 minutes, a second blood sample will be taken.

If the medical prescription specifies different timing, the blood samples will be taken according to the instructions in the prescription, maintaining the conditions described above.
